# Introducing Whisper \$WISP – the First Suite of DeFi Tools on zkSync

Whisper (\$WISP) is a revolutionary project on the zkSync blockchain building a comprehensive suite of DeFi products and tools, as well as other blockchain utilities such as games. Our goal is to become the premier go-to suite of DeFi tools on zkSync, offering our users a complete ecosystem for their financial needs on this innovative and secure blockchain.

Our team is made up of experienced developers, DeFi enthusiasts, and blockchain experts who are passionate about building a more accessible and user-friendly financial system for everyone. We believe that the future of finance lies in decentralization, and we're dedicated to creating a suite of tools that enable users to participate in this new paradigm in a safe, secure, and transparent way.

At the core of the Whisper ecosystem is our native token, \$WISP. This token serves as a utility within the platform, providing access to a range of tools and services designed to help users manage their assets, make informed investment decisions, and participate in the broader DeFi ecosystem.

# Creating a Safe Environment for New Investors on zkSync

One of the main goals of the Whisper platform is to create a safe and secure environment for new investors on zkSync. With the rapid growth of the DeFi ecosystem, it's more important than ever to ensure that users have access to the tools and resources they need to protect their investments and make informed decisions.

To achieve this goal, we've developed a range of tools and services that are designed to help users navigate the complexities of the DeFi space and minimize their exposure to risk. Our liquidity locker, for example, allows users to lock their tokens' liquidity, providing a safeguard against rug pulls and other forms of exploitation.

Similarly, our token locker enables users to lock their team tokens or other tokens, ensuring that investors can feel safe knowing that those tokens can't be sold on the market. With our lock viewer, users can view all locked tokens and liquidity in an overview of all, helping them stay informed and in control of their investments.

In addition, our launchpad and contract deployer offer a safe and easy way for other projects to launch their tokens and contracts on zkSync. With our launchpad, other projects can launch their token through our platform, leveraging the security and efficiency of zkSync to help them reach a broader audience.

Finally, our contract deployer enables users to easily deploy contracts on zkSync and automatically lock liquidity. With our contract deployer, you can set taxes within a reasonable limit and launch a contract with just a few clicks. This provides a safe opportunity for investors to invest their money knowing that the contract doesn't contain malicious code.

By providing these tools and services, we're working to create a more secure and accessible DeFi ecosystem for all users, from new investors to seasoned professionals. With the Whisper platform, users can feel confident knowing that they have the tools and resources they need to make informed decisions and protect their assets.

# An Overview of All DeFi Tools for WISP

At WISP, we believe in providing our users with the most comprehensive suite of DeFi tools available on the market. Our DeFi tool suite is designed to provide a one-stop-shop for all of your DeFi needs. Here's a quick overview of the tools we offer:

Introduction

New Investors

Overview

Predictions

Staking & farming

Pools

Roadmap

Tokenomics

## Liquidity Locker:

Our liquidity locker allows users to lock their token liquidity for a set period of time. This is a great way to ensure that your liquidity is secure and that you're protected against rug pulls or other nefarious activities.

## Token Locker:

Our token locker allows teams to lock their tokens for a set period of time. This is a great way to ensure that your tokens are safe from market volatility, and that investors can rest easy knowing that the tokens can't be sold on the market.

## Lock Viewer:

Our lock viewer provides a comprehensive overview of all locked tokens and liquidity. This is a great way to get a bird's eye view of your DeFi activities and to ensure that everything is secure and in order.

### **Predictions:**

Our predictions game is a fun and exciting way to engage with the market and test your knowledge of cryptocurrencies. You can make predictions on the future price of various cryptocurrencies and earn rewards for your accuracy.

### **Staking:**

Our staking tool allows users to stake their WISP tokens and earn rewards for doing so. This is a great way to earn passive income and grow your WISP holdings.

### **LP Farming:**

Our LP farming tool allows users to stake a combination of WISP and other tokens (such as Ethereum) and earn rewards in WISP. This is a great way to grow your WISP holdings while also supporting the WISP ecosystem.

### **Pools:**

Our pools tool allows users to stake their WISP tokens for rewards in another token, or to stake a pair of WISP and another token for rewards in the other token.

### **Launchpad:**

Our launchpad allows other projects to launch their tokens through WISP, providing a safe and secure environment for investors to participate in token sales.

### **Contract Deployer:**

Our contract deployer allows users to easily deploy contracts on zkSync and automatically lock liquidity. You can set taxes within a reasonable limit and launch a contract with just a few clicks.

At WISP, we're committed to providing our users with the most comprehensive and secure suite of DeFi tools available on the market. Whether you're a seasoned DeFi investor or new to the space, we have everything you need to engage with the market and grow your holdings.

# Making Crypto Fun with Predictions

Introduction

Pools

Roadmap

Tokenomics

At WISP, we believe that DeFi should be more than just a way to make money – it should also be fun and engaging. That’s why we’re excited to introduce our predictions game.

Our predictions game is a fun and exciting way to engage with the market and test your knowledge of cryptocurrencies. You can make predictions on the future price of various cryptocurrencies and earn rewards for your accuracy.

We believe that our predictions game is just the beginning of what’s possible in the DeFi space. As we continue to build out our suite of DeFi tools, we’ll be exploring new and innovative ways to make DeFi more fun and engaging for our users.

In the WISP prediction game, players place bets on whether the price of a chosen cryptocurrency, such as Bitcoin, will rise or fall in the next few minutes. The bets are pooled together to create a prize pool, and the outcome is determined by the actual price of the cryptocurrency at the end of the betting period, using blockchain technology to verify the price. Players who correctly predict the outcome will receive a share of the prize pool, based on the size of their bet and the number of correct predictions made by other players. The game is player versus player, making it a fun and competitive way to engage with cryptocurrency markets.

# Staking and LP Farming

Staking and LP farming are essential parts of the WISP ecosystem. They allow holders of WISP to earn rewards for holding and staking their tokens. Staking involves locking WISP tokens in a contract for a certain period of time. This helps improve the WISP ecosystem and allows holders to earn rewards in the form of additional WISP tokens.

LP farming, on the other hand, involves staking a combination of WISP and another token, such as Ethereum, in a liquidity pool. This helps provide liquidity to the WISP ecosystem and allows holders to earn rewards in the form of additional WISP tokens.

30% of the entire WISP supply is dedicated to rewards for both staking and LP farming. This ensures that there is always an incentive for holders to participate in staking and providing liquidity.

Tokenomics

# Pools

Pools are another exciting feature of the WISP ecosystem. They allow holders to earn rewards in other tokens by staking their WISP tokens. Alternatively, holders can stake a pair of WISP and another token to earn rewards in the other token. Staking a pair of tokens gives higher yield than Single Asset Staking. Pools provide a way for holders to earn additional rewards while still holding their WISP tokens. They also help provide liquidity to the WISP ecosystem and can help increase the overall value of the token. As we continue to build out the WISP suite of DeFi tools, we plan to introduce even more exciting features to our pools. This includes unique reward structures and other incentives to encourage participation and provide even more value to our holders.

# WISP

# Detailing our Roadmap

At WISP, we have an ambitious roadmap to become the premier suite of DeFi tools on zkSync. Our current offerings include the Liquidity Locker, Token Locker, and Lock Viewer. However, we plan to continue building out additional DeFi tools and fun blockchain games.

In the near future, we plan to launch our predictions game, allowing users to bet on the future price of cryptocurrencies. We will also be rolling out staking and LP farming, which will allow users to earn rewards for holding WISP and staking other tokens in combination with WISP.

Beyond that, we have many more exciting features and products planned for the future. We plan to launch Pools, where users can stake WISP and other tokens for rewards. We also plan to introduce a Launchpad, allowing other projects to launch their tokens through the WISP platform.

Our ultimate goal is to provide users with a comprehensive suite of DeFi tools that are easy to use and accessible to all. We believe that by offering a variety of tools and games, we can attract a diverse range of users and help bring DeFi to the masses.

# Tokenomics – The WISP Token

Whisper's native token is the WISP token, with a total supply of 100 million tokens. At launch, 50% of the tokens are in circulation. The remaining tokens are allocated as follows: 15% is reserved for future partnerships, 5% for future fundraising, and 30% is reserved for rewards for staking and LP farming. The WISP token will be used as a utility token within the WISP ecosystem, providing access to our suite of DeFi tools and blockchain games. Holders of WISP tokens will also benefit from rewards through staking and LP farming.

We believe in a fair distribution of tokens and that the allocation above will provide a solid foundation for the growth of WISP. We will continue to monitor and adjust the token allocation as needed to support the long-term sustainability of the project.
